

**METHOD, SYSTEM, SOFTWARE, AND SIGNAL FOR  
PERFORMING EVENTS FOR RELATED PROGRAMS**

**ABSTRACT OF THE DISCLOSURE**

5.

A method, system, software and signal wherein a subset of program information for related programs is maintained with program information for a given program. The program information for the given program, including the subset of program information for related programs, can be maintained in an electronic program guide (EPG). A system can use the information in the EPG to schedule and perform program events automatically, or information can be provided to users so that the users can manually schedule or perform program events.
